Apex Precision Manufacturing Pvt. Ltd.

Factory Health & Safety Manual

CONTROLLED SAMPLE DOCUMENT FOR RAG CHATBOT TESTING

Document ID	APM-HSE-MAN-003	**Department**	Safety
Version	1.0 – Sample	**Effective date**	30 October 2026
Document owner	Safety Department	**Review status**	Training sample
Classification	Internal – Fictional	**Approval**	Not approved for real operations

IMPORTANT NOTICE

This document is fictional sample content created solely to develop and test a Retrieval-Augmented Generation (RAG) chatbot. It is not an approved company procedure, machine-specific instruction, legal policy, or substitute for manufacturer documentation, site risk assessments, qualified supervision, or applicable laws. Do not use it to operate, repair, inspect, or service real equipment.

Purpose

Provide general workplace safety expectations and emergency reporting guidance for employees and visitors.

Document control

The document owner is responsible for review and controlled distribution in a real organization. For this training dataset, version 1.0 is fixed and all names, policies, workflows, and examples are fictional.

1. Safety commitment

• Every employee has authority and responsibility to stop and report work that appears immediately unsafe.

• Follow site induction, posted instructions, machine-specific risk assessments, and supervisor directions.

• This sample manual is not a substitute for a legally compliant site safety program or emergency plan.

2. Personal protective equipment

• Wear PPE identified by the task risk assessment and area signage, such as safety footwear, eye protection, hearing protection, or task-specific gloves.

• Inspect PPE before use and report damaged or unsuitable equipment.

• Do not wear loose clothing, jewelry, or unsecured hair near rotating machinery.

3. Machine and work-area safety

• Never bypass guards, interlocks, light curtains, or emergency-stop devices.

• Keep walkways, exits, fire equipment, and electrical panels unobstructed.

• Use only approved tools and lifting equipment; follow the rated capacity and inspection requirements.

• Do not clean, adjust, or reach into moving machinery.

4. Hazardous energy and maintenance

• Maintenance and servicing involving hazardous energy must be performed under the site's approved lockout/tagout or energy-isolation procedure by authorized personnel.

• Identify all energy sources, isolate them, apply personal locks and tags, verify zero-energy state, and follow the approved procedure before work begins.

• Never rely solely on an emergency stop or control-panel switch as an energy-isolation method.

5. Chemical and spill awareness

• Read the current Safety Data Sheet (SDS) and container label before handling a chemical.

• Use designated storage, ventilation, spill controls, and PPE described by the SDS and site procedure.

• Report spills immediately; only trained responders should handle spills beyond their authorization.

6. Emergency response

• Raise the alarm and follow the site's emergency response plan and evacuation routes.

• Do not re-enter an evacuated area until authorized by the incident controller or emergency services.

• Report injuries, near misses, unsafe conditions, and property damage promptly, even when no injury occurred.

7. Training and records

• Safety induction; task-specific competency; PPE issue records; hazard reports; incident and near-miss reports; emergency drill records.
